

Anti-interference fiber optic communication tools

Anti-interference fiber optic communication tools

To detect fiber eavesdropping under interference scenarios, we propose a detection scheme based on the analysis of SOP and EVM parameters. Leveraging deep learn.

In order to achieve accurate transmission of protection signals in fiber optic communication networks, it is necessary to perform channel balancing configuration of fiber optic ...

Addressing the linear interference challenges posed by OFDM in multi-channel fiber optic communication networks, this paper introduces an innovative linear anti-interference method.

In this article, for enhancing the anti-interference of the FSO communication systems, we have proposed a demodulation system of the compressed hybrid vortex beam combined with an ...

In this paper, a resource allocation algorithm based on deep reinforcement learning (DRL) is proposed in the high-speed railway (HSR) scenario.

The Fiber Optic Reel offers a sleek, durable solution for storing and managing optical fibers with ease. Built for reliability, it ensures smooth cable deployment without straining the fiber.

To address this need for deep integration of “viewing” and “control,” anti-interference fiber optic video transmission modules specifically designed for FPV control have emerged. These modules deeply ...

Our company independently develops and produces fiber optic anti-interference devices, which can solve signal free scenarios and are not affected by electromagnetic interference. They are suitable ...

Learn how to minimize signal interference in fiber optic systems and discover the latest technology trends and solutions.

ZION drone optical fiber systems deliver zero-latency, anti-interference communication for UAV and FPV applications. Reliable long-distance optical fiber transmission.
