

Applications of Active Optical Transmitters

Overview

Longer Transmission Distances – Ranging from a few meters to hundreds of kilometers. Lower Signal Attenuation – Optical signals maintain integrity over longer distances. D-Lightsys □ transceivers end the optical link at the board level, converting electrical signals to optical ones and vice-versa. The wide range of data rates (up to 10+ Gbps) and broad choice. Fiber to the home (FTTH) is a technology that connects optical fiber from a central location to individual buildings such as houses, offices and apartments. FTTH deployment has progressed significantly before subscribers switch to optical fibers instead of copper lines for broadband Internet. h as the telegraph, telephone, television, and ultimately the Internet.
