

# Are fiber optic pigtails harmful

## Overview

As its name suggests, these pigtails are only for indoor use and unsuitable for harsh environments. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. A fiber optic pigtail is a short length of optical fiber —typically 0. The connector end is polished and tested under factory conditions, ensuring low insertion loss and high return loss. It is usually suitable for field termination using a mechanical or fusion splicer. When compared to field-installed rapid.
