

Cable trays become smaller at bends

Overview

Metal actually expands and contracts with weather change, and leaving some small gap in between tray sections is a must. When the distance between the metals is too low, the metals will push against each other and bend. When it is excessive, the tray will be weak and. Cable tray bends are designed to guide cables around obstacles, changes in direction, or elevations in an electrical system. They come in various configurations, including horizontal bends, vertical bends, and tees. Vertical Bend (Up / Down Bend) 3. Tee. The bends, tees, crosses, risers and reducers of wire mesh cable tray can be easily and quickly made live at the project by using a bolt cutter. A properly designed and installed cable tray system will provide. Students trading aid on how best to put an internal 90 degrees bend in steel cable tray.
