

Can optical modules replace optical transceivers

Overview

Embedded optical modules don't just replace traditional pluggable optical transceivers—they blow them out of the water when it comes to bandwidth and energy savings. Introduction Engineers, purchasing managers and installers often see the terms Transceiver, optical module and fiber optic module used interchangeably — and that causes confusion. It is a passive device that cannot be used alone. Modern Ethernet networks are built around widely standardised optical interfaces and optical transceivers are designed and built - by OEMs - to an MSA, agreed to by both the. Optical modules and fiber optic transceivers are both important devices in fiber optic communication systems, is there any difference between them?

How to choose?

This article will introduce the difference between the two and the precautions to be taken when connecting. Dual fiber modules use two fibers.
