

Cascading Multi-Storage Fiber Optic Switches

Overview

Clustering involves managing multiple switches as a single unit using software without requiring physical connections, like stacking cables. Cisco MDS 9148V 64-Gbps 48-Port Fibre Channel switch brings the latest high-performance, low-latency Fibre Channel Storage Area Network (SAN) technology to market. Along with the higher bandwidth, the Cisco MDS 9148V switch supports ease of configuration and management, detailed and in-depth. Fiber optic switches, multiplexers and demultiplexers block or route optical signals in a fiber optic network. Where switches simply block or pass optical signals on individual or multiple channels, multiplexers route multiple channels out to a single fiber optic cable. Various port sizes are available ranging from 4 up to 52 ports. 15 Dongfu West Road 2, Xinyang Street, Haicang District, Xiamen, China.
