

Chile Electricity and New Energy Data Center

Overview

The Plan focuses on three objectives: 1) Boost industry growth by improving investment conditions through regulatory clarity and streamlined processes; 2) Develop a decentralised, sustainable data centre sector powered by renewable energy, reducing environmental impact; and 3). The Plan focuses on three objectives: 1) Boost industry growth by improving investment conditions through regulatory clarity and streamlined processes; 2) Develop a decentralised, sustainable data centre sector powered by renewable energy, reducing environmental impact; and 3). enters. Prominent voices emphasized the need for streamlined and transparent regulation to enable faster infrastructure dev ucture. The convergence of abundant renewable energy resources, rising global demand for data services, and growing regional technical capabilities presents a significant. But in 2025, another country has emerged as a critical hub for digital infrastructure: Chile. Santiago, the nation's capital, has become a focal point for hyperscaler expansion. These deals—ranging from solar-only contracts to solar-plus-storage hybrids and project acquisitions—underscore a shift in Chile. Chile has undeniably positioned itself as a regional leader in solar and wind energy development.

over the last decade, and the figures ratify the country's "green seal": 68% of the energy Chile generated in 2024 came from renewable sources. 3 billion for energy projects in Chile.
