

## Cold joint making

### Overview

Learn how to prep and bond a next-day concrete pour to repair a cold joint. Identify cold. A cold joint in concrete construction is a plane of weakness that forms when new, wet concrete is poured against concrete that has already begun to harden. This discontinuity occurs because the older material has passed its initial setting time, preventing a true chemical bond with the fresh mix. Understanding what cold joints are, their effects, how to prevent them, and how to repair them is essential for ensuring the quality and integrity of concrete structures. Cold joints appear during the pouring process when one layer of.
