

Custom Process for Anti-Certification Connectors for Optical Backplanes in Oil and Petrochemical Industries

Overview

In this paper we will examine what attracts system architects and mechanical designers to the use of blind mating optical interconnects as well as design requirements, fiber density drivers, maintenance, industry dynamics and our views towards future needs and challenges. For decades, Sanmina has been the technology leader for the world's most advanced backplanes. Amphenol's experience in developing leading-edge, end-to-end custom backplane, midplane and system solutions is unique in the industry. With over 30 years of designing, manufacturing, and testing of high-speed backplane assemblies, Amphenol has emerged with a leadership position in the industry. Optical backplane connectors allow the connection of optical fibers through blind mating interfaces in similar fashion to electrical backplane connectors. These dense and highly engineered interfaces have been utilized successfully for decades to enable scalable capacity systems for applications in. Open. Our extensive offering of modular standard products enables us to leverage existing solutions and proven design concepts to meet any custom

application. Excellent signal. International certification options can help open new opportunities and markets.

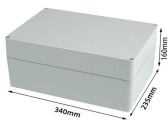

Custom Process for Anti-Certification Connectors for Optical Backplane

Open.Tech specializes in providing custom backplane assemblies with a focus on high-speed, high-density components that power them. Our expertise includes the design and manufacture of critical ...

Explore our latest rugged high-speed connector solutions for Aerospace, Defense and Marine industries supporting VITA standards, VPX protocols, and wired connections for protocols up to 10 GB/s.

Our journey from implementing 1Gb/s speeds up to 112Gb/s in backplanes is a testament to our expertise and dedication. Leveraging our traditional backplane architecture, we integrate ...

We design, build and test customised Backplane & Midplane solutions for most of the global leaders in IT Datacom and Telecoms technology systems. We have products performing to 56gb/s today in the ...

As optical backplane connectors are often seated deep within a chassis or rack or on narrowly spaced cards, inspection and cleaning aspects of fiber optic interfaces are greatly aggravated due to ...

In order to deliver against all of our customers' custom backplane requirements, we also leverage our relationships with outside connector vendors and low-cost region fab suppliers.

In this post, we explore the advanced techniques Atrenne applies to ensure our custom backplanes meet the highest standards of performance in the most demanding environments.

Custom backplane designs such as this rigid-flex combination are used in rugged, field-deployed mission-critical applications. Note how a high number of MIL38999 I/O connections was achieved.

Our connector certification solutions are available for the U.S. as well as Canada and Mexico. International certification options can help open up new opportunities and markets to you.

Our in-house technical team has decades of experience with high speed backplane design, layout, mechanical and thermal design, signal integrity, power distribution and advanced connector selection.
