

Disassembling the construction site electrical distribution box

Overview

When dismantling electrical conduit and boxes, all straps and supports must be removed, and it is important to plug existing openings from junction boxes and gear to national code requirement. A temporary power distribution box (TPDB), often called a spider box, functions as a portable electrical hub that centralizes and protects power distribution on a job site. This device safely takes power from a single source, such as a generator or temporary utility service, and divides it into.
