This document offers a complete guide to Cisco's Smart Grid Field Area Network (FAN) solution architecture. It covers various ways this solution can be used, including: ● Monitoring secondary substations for scenarios like Fault Location, Isolation, and Service Restoration (FLISR) and Volt/VAR. Distribution automation (DA) is a family of technologies, including sensors, processors, information and communication networks, and switches, through which a utility can collect, automate, analyze, and optimize data to improve the operational efficiency of its distribution power system. Products. Utility organizations recognize the benefits of Distribution Automation: improving efficiency, optimized incident

response, reduced system downtime. What smart utilities are also realizing is that all these business changing benefits can be efficiently delivered across the entire grid over a Tait. SEL Engineering Services provides distribution automation control solutions that improve reliability metrics, reduce customer outages, and provide rapid fault detection and system restoration—and are custom-engineered to your operational requirements. With multiple backup nodes connected to a central hub, it ensures continuous connectivity, fast fault identification, and simplified maintenance.
