

Distribution box support column

Distribution box support column

Vapour rises in the space between the troughs. The troughs are often interconnected by cross channels (called as parting box) that equalize liquid levels in different troughs. These trough type liquid ...

Use the appropriate “Series Equipment Rating” column equal to, or greater than, the available fault current, to determine the allowable combinations of main (upstream) and branch (down-stream) ...

Overview of Sulzer Chemtech column internals, focusing on liquid distributors for packed columns. Includes specifications and applications.

In order to obtain good distribution of the liquid, care should be taken to ensure that the maximum horizontal deviation of the support ring does not exceed 0.2 % of the column diameter.

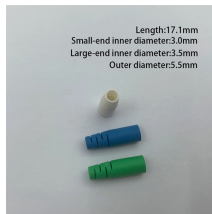

Vista Architectural Columns offer the capacity to feed numerous workstations, supply connections to a large area or even support digital signage—all while adding an elegant look to any décor.

All Lantec liquid distributors are designed to be supported from a circumferential ring supplied as an integral part of the column. Distributor furnished in sections, suitable for installation through manway ...

Designed for columns 900 mm and larger, they handle liquid loads from 2 m³/m²/hr to 50 m³/m²/hr and are compatible with both structured and random packing. The straightforward design simplifies ...

Generally, one parting box is used for smaller towers while multiple parting boxes are used for larger diameters or high liquid rates. Trough distributors can be made in plastics, FRP or metals and ceramics.

Decades of experience in design and construction, combined with continuous developments in separation technology, enable us to offer you optimum internals. Tailor-made gas and liquid ...
