

Do I need to replace my router with a 100M fiber optic connection

Do I need to replace my router with a 100M fiber optic connection

Wondering which to get between Fiber vs. Cable Internet, this post is for you. And, if you have the options, it's OK to get both.

To maximize your internet speed, place your router in a central, open location. Signal strength weakens with distance and obstructions, which can create dead zones.

All in all, replacing the gigabit router under 100M broadband cannot increase the speed of the wired network, but can increase the download speed of ...

For wired networks under 100M fiber, it's unnecessary—you won't see improved speeds. But for wireless performance, especially with modern devices, a gigabit router can make a significant difference.

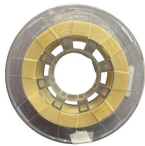

In most cases, yes, you can use your existing router with fiber optic internet, provided it has a WAN (Wide Area Network) Ethernet port and your ISP provides a modem/ONT with an Ethernet output.

Find out why your old modem and Wi-Fi router might not be compatible with your new high-speed fiber-optic service ... and what you can do about it. If you recently changed internet ...

All in all, replacing the gigabit router under 100M broadband cannot increase the speed of the wired network, but can increase the download speed of the wireless network. If you are mainly ...

No special router needed for fiber internet. Use a compatible router for optimal performance.

While many existing routers can connect to a fiber network, there are several scenarios where upgrading your router is not just recommended, but essential to fully leverage the benefits of fiber optic internet.

To fully benefit from these improvements, you'll need a Full Fibre router capable of handling the high data rates associated with fibre-optic technology. Fortunately, most service ...

Wondering if you can use your own router for fiber internet? Learn about compatibility, setup tips and what to consider before replacing your equipment.
