

Does a router necessarily need fiber optic cable

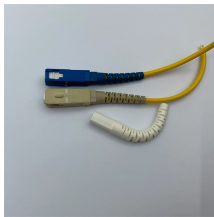

Overview

Any standard router, including the primary unit of a mesh Wi-Fi system, will work at its full potential with any standard Internet broadband terminal device —modem, Fiber-optic ONT, or others. Instead of a modem, fiber connections require an Optical Network Terminal (ONT), a device that converts fiber signals into an Ethernet connection. Let's take a closer look at the fiber to the home equipment you'll need and answer some of the most common questions about. Unlike cable internet, which uses a modem to change signals, fiber internet uses an ONT. This device connects the fiber optic line to your home network. However, you will need specific equipment to get. The answer is actually no—fiber optic equipment differs significantly from cable setups.

Does a router necessarily need fiber optic cable

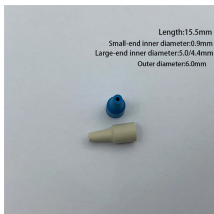

The answer is no; fiber internet doesn't need a traditional modem. A standard cable or DSL modem's job is to convert electrical signals into digital data that your devices can understand. ...

While the internet connection comes in via fiber optic cable, the device that manages your home network—your router—still needs to be able to communicate with the incoming signal.

You don't need a special router, per se, but you do need one that can handle the speed fiber provides. If you're paying for gigabit fiber service, make sure your router supports at least gigabit Ethernet ports ...
