

# Does multimode fiber optic have gigabit speeds

## Overview

Multi-mode links can be used for data rates up to 800 Gbit/s. Multi-mode fiber has a fairly large core diameter that enables multiple light modes to be propagated and limits the maximum length of a transmission link because of modal dispersion. 1 defines the most widely used. Multimode fiber is a common choice to achieve 10 Gbit/s speed over distances required by LAN enterprise and data center applications. OM5 fiber delivers the longest reach at 150 meters through SWDM channels.

## Does multimode fiber optic have gigabit speeds

Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. Multi-mode links can be used for data rates up to 800 Gbit/s.
