

Does the electrical panel in your home get hot

Overview

Electrical panels can overheat for a few reasons, like too many devices running at once or if the panel is old and worn out. Overheating inside a panel is not just about a breaker panel hot to the touch. It's a visible symptom of deeper electrical stress: loose terminations. While vital for our day-to-day lives, electrical systems are complex and difficult to understand, but one thing that should be easy to understand is that a hot electrical panel is not a normal occurrence. In most real-world installations, the root cause is localized. If your electrical panel feels hot or is buzzing/humming, that's a safety warning you shouldn't ignore. If these symptoms persist.
