

Door-to-door delivery hot aisle IP54

Door-to-door delivery hot aisle IP54

Based on a non-raised floor environment, this hot aisle containment project uses dual hinged doors and the Polar Cap 2 retractable roof system.

Custom sized for each aisle requirement, these doors allow easy access to hot or cold aisle, and effective sealing to maintain thermal management. This clear roof system is framed to hold securely ...

Essentially creating a room within the aisle, the system helps keep hot and cold air separated to make existing air conditioning systems in data center and edge-of-network installations more efficient.

Dual double sliding door system to include auto closers, no threshold design, and door catches to hold the doors open. Material: 6 with a 204-R1 etched and cl Glazing: Clear acrylic sheet. Provide door ...

Adaptable to hot and cold aisle containment, the Vertiv Aisle Containment system allows you to deploy containment before or after racks are installed to simplify installation and speed deployment of new ...

High energy costs and accelerated energy consumption has forced data center managers to implement strategies to achieve separation between the hot and cold air in the data center.

Hot aisle containment is used to capture and direct hot exhaust air back to the cooling units. This popular option is ideal for data centers looking to maximize efficiency as it prevents hot and cold air ...

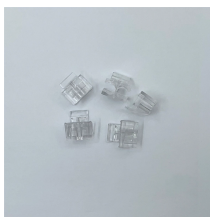

Adaptable to hot and cold aisle containment, the Aisle Containment system allows you to deploy containment before or after racks are installed to simplify installation and speed deployment of new ...

Cool Shield™ containment offers state-of-the-art hot and cold aisle containment solutions designed to maximize data center efficiency while significantly reducing ...

Custom engineered hot and cold aisle containment solutions that keep your data center running smoothly — and make your build-out be more efficient, too.

Cool Shield™ containment offers state-of-the-art hot and cold aisle containment solutions designed to maximize data center efficiency while significantly reducing power consumption.
