

Ethernet Silicon Photonics Technology

Overview

NVIDIA's Spectrum-X Ethernet Photonics switches usher in the next era of AI infrastructure by integrating co-packaged optics (CPO) directly onto the ASIC, overcoming the limits of electrical signaling in large-scale AI factories. Replacing pluggable transceivers with silicon photonics on the same package as the ASIC, NVIDIA CPO innovations provide 5x better power. For HPC and AI workloads, which are both latency and bandwidth sensitive, we stick with the older adage: Switch when you can, route if you must. And when it comes to networking cabling, we go with: Copper when you can, fiber when you must. Nothing illustrates this last principle better perhaps than. NVIDIA's silicon photonics interconnect technology is expected to replace the traditional optical interconnect, and Spectrum-X Ethernet Photonics' rundown shows how big a role it will play in scaling AI compute. The engineering approach reduces power consumption by 3. It decreases signal loss from 22 dB to 4.

Ethernet Silicon Photonics Technology

Ethernet is a network protocol that controls how data is transmitted over a LAN and is referred to as the IEEE 802.3 protocol. The protocol has evolved and improved over time to transfer ...

NVIDIA's silicon photonics interconnect technology is expected to replace the traditional optical interconnect, and Spectrum-X Ethernet Photonics' rundown shows how big a role it will...

Ethernet is a networking technology that includes the protocol, port, cable, and computer chip needed to plug a desktop or laptop into a local area network (LAN) for speedy data transmission ...

GTC Nvidia is set to make available Ethernet and InfiniBand switches featuring silicon photonics with co-packaged optics to advance its vision of datacenters with "millions of GPUs," arguing...

Ethernet was invented in the 1970s and first standardised in 1983 with a speed of 10Mbps. Since then, it's evolved into Carrier Ethernet, delivering up to 100Gbps or more over long distances. ...

Micas's system uses a single CPO component, which is made up of Broadcom's Tomahawk 5 Ethernet switch chip surrounded by eight 6.4-Tb/s silicon photonics optical engines.

The silicon photonics engines were created by Nvidia itself (Mellanox has plenty of expertise in making pluggable optics) and a new design for micro-ring modulators (MRMs) was ...

NVIDIA has just introduced the use of next-gen silicon photonics interconnect technology: Spectrum-X Ethernet Photonics has massive improvements.

While LANs may use wired or wireless media, Ethernet (IEEE 802.3) dominates as the primary wired LAN standard. It provides standardized framing, efficient media access control, and ...

Before Wi-Fi became ubiquitous, Ethernet was the preferred way to get your devices onto the internet. By running Ethernet cables in a local area network (LAN) or wide area network (WAN), ...

Dive into NVIDIA Spectrum-X™ Ethernet Photonics and how it directly impacts application-level AI performance, enhancing the productivity and output of gigascale AI factories.

Nvidia expects Quantum-X InfiniBand switches to be released later in 2025, while Spectrum-X Photonics Ethernet switches will arrive in 2026.

Ethernet is a traditional technology used to connect devices in a wired local area network (LAN) or wide area network (WAN), enabling them to communicate with each other through a ...

Nvidia expects Quantum-X InfiniBand switches to be released later in 2025, while Spectrum-X Photonics Ethernet switches will arrive in 2026.

The Ethernet standards include several wiring and signaling variants of the OSI physical layer. Systems communicating over Ethernet divide a stream of data into shorter pieces called frames.

NVIDIA has developed co-packaged optics (CPO) technology with TSMC for its upcoming Quantum-X InfiniBand and Spectrum-X Ethernet ...

NVIDIA has developed co-packaged optics (CPO) technology with TSMC for its upcoming Quantum-X InfiniBand and Spectrum-X Ethernet switches, integrating silicon photonics ...

Ethernet is a family of technologies commonly used for local area networking (LAN). It enables devices within a defined geographic area, such as a home, office, or campus, to ...

NVIDIA has unveiled a pair of co-packaged silicon photonics networking switches that it says will allow AI facilities to connect millions of GPUs across sites while drastically reducing energy ...

Ethernet is the traditional technology for connecting devices in a wired local area network (LAN) or wide area network. It enables devices to communicate with each other via a protocol, which ...

Ethernet is technology designed to solve the problem of packet collision by having network-connected devices follow a set of rules that let devices communicate.

In this blog post, Ashkan Seyedi, Director of Product Marketing at NVIDIA, explores key optimizations and innovations in the protocol and hardware of Spectrum-X Ethernet Photonics that ...
