

How many meters away is the level 3 electrical distribution box from the machinery

Overview

Depth: A minimum of 3 feet (900 mm) in front of the electrical panel for installations up to 600V. The core components of this standard involve the Depth of working space, which varies based on the system's. Minimum clearances are established for work spaces in front of high voltage - electrical equipment such as switchboards, control panels, switches, circuit breakers, switchgear and motor controllers. These distances indicate space that must be clear to the floor. We have no relationship with advertisers, products, or services discussed at this website. - Daniel Friedman, Publisher/Editor/Author
