

# How to connect a network cable to an optical-to-electrical converter module

## Overview

Insert the Gigabit electrical port module into the SFP optical port, and then connect the Category 6 network cable to the Gigabit RJ45 port. This method realizes SFP optical port to RJ45 electrical port conversion and supports full duplex gigabit transmission. The SFP port is a built-in optical port of a Gigabit Ethernet switch, so it cannot be directly connected with a twisted pair or a jumper. SFP transceivers bridge electrical and optical signals, making them indispensable in data centers, telecom networks, and. To convert an Ethernet connection to fiber optic, you will need the following equipment: Media Converter: This device converts electrical signals from Ethernet to optical signals for fiber optic cables and vice versa. These methods can also be used to run your home network over fiber optics.
