

How to connect the optical cable to the imaging lens

How to connect the optical cable to the imaging lens

This article will guide you through the necessary tools, materials, and methods on how to connect fiber optic cables effectively, ensuring you achieve optimal performance from your fiber optic ...

When imaging with Anterior Module, first select the imaging light to be white or blue and then set the brightness. The default value is 5, which is suitable for most imaging situations.

Fiberscopes work by using fiber optic bundles, which consist of numerous fiber optic cables. These bundles have an eyepiece on one end and a lens on the other end. The lens end of the fiberscope is ...

There are three common connection scenarios: connecting to a sensor from a Velodyne-supplied Garmin 18x LVC GPS receiver, connecting to it from a computer's serial port, and connecting directly ...

This guide will explore the various types of optical cables, where to connect them, and the significance of each connection point in achieving optimal performance.

	<p>The C-mount standard allows you to connect a microscope camera directly to the phototube without any intermediate optics. The camera is screwed on to the photo tube.</p>
-----------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<p>Installing the fiber optic cable adapter included with the Backscatter M52 Wide Angle Air Lens. An underwater side-by-side comparison demonstrating the difference between the Backscatter M52 ...</p>
-----------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<p>Light loss and warmer than normal instrument temperatures may be encountered if using a light source fiber optic cable with a larger aperture or bundle diameter than the instruments receiving aperture or ...</p>
------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<p>Connecting optical cables involves several steps and requires careful handling to ensure optimal performance and reliability. Here''s a detailed explanation of the process:</p>
-------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<p>Connect the hub only to a laptop that is approved according to IEC60950 and to UL60950-1. The laptop and all its accessories should be located at least 1.5m away from the patient.</p>
-------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

	<p>The confocal imaging system allows to image the retina with non or poorly dilated pupils. This is especially important for diabetics because they typically do not dilate very well and account for a ...</p>
-------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The fusion fiber Light Cables satisfy the toughest requirements for illumination during endoscopic procedures. They have fused fiber optics to ensure the highest possible temperature resistance and ...

HOLOGIC® fiberoptic cables are designed to deliver maximum light when coupled to a medical grade light source. HOLOGIC® fiberoptic cables can be used with quartz halogen, metal halide, LED, or ...
