

# How to identify single-mode or multi-mode optical cables

## Overview

Q: How to tell single mode from multimode fiber?

A: Optical fiber cables can be identified by the color-coding of the Bale clasp. This guide explains how to identify them by appearance, labeling, and. There are two main types of fiber optic cables: single mode and multimode. From the fiber core and core size to single mode fiber and multimode fiber cables, each type of optical cable serves a specific purpose depending on transmission distance, network. Single mode fiber is designed for long-distance communication, utilizing a smaller core diameter (typically 8 to 10 micrometers) that allows only one light mode to travel along the fiber.
