

## How to make the two core switches communicate with each other

### Overview

Switch cascading is a traditional method to interconnect multiple Ethernet switches. Among the various topologies, daisy chain and star are the most. Connecting two switches or configuring them to prevent access between each other can be complex. Use access port on both sides 2. Use trunk port on both sides All interfaces in the new switch are in same VLAN and there is no requirement to configure multiple VLAN's on it. With multiple switches, each switch will still. Inter-VLAN routing is the way computers and devices in different VLANs (Virtual Local Area Networks) talk to each other.

## How to make the two core switches communicate with each other

Communication through multiple switches is similar to communication through one switch. This article illustrates exactly how it works using two switches.

Connecting two switches or configuring them to prevent access between each other can be complex. This guide will discuss the methods and configurations needed to achieve both scenarios.

This article will explore three common connection methods: switch cascading, switch stacking, and switch clustering, and will help you determine the best approach based on network ...

If switch 2 will have all of its interfaces in a single vlan and if there is no future requirement in switch 2 for multiple vlans then I see no reason to configure the connection as a trunk. ...

As we've seen, there are three main methods for connecting multiple Ethernet switches: cascading, stacking, and clustering. The table below summarizes the key differences between these ...

Thus, multiple Ethernet switches are connected together using different techniques, primarily switch cascading, switch stacking, and switch clustering. In this comprehensive guide, we'll ...

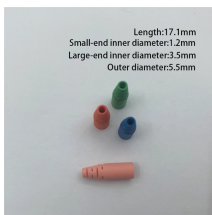

I would recommend using OSPF, and have all of the transit interfaces between the switches and routers in a single VLAN. Or put a router into one VLAN and the other router into a ...

This article provides a step-by-step walkthrough, including configuring VLANs on a Cisco switch, setting up trunk ports, creating router sub-interfaces, and assigning IP addresses.

I created a trunk port that connects to a layer 2 switch. I can now successfully access the layer 3 switch VLANs from an access port on the layer 2 switch. However, I am not sure how to make the switches ...
