Overview

The Relays-Online training center offers you the information you need to get started with your protection and control products, as well as step-by-step guidance towards programming your products' functionality by creating and editing protection and control logics and configurations. This course is part of a multi-part course series about one of the main areas of power engineering: power system protection and control. Power system protection and control ensures the reliable continuous operation of power systems and is therefore an essential area of power engineering. In this. Developing basic setting specifications for numerical relays is a boring process for most electrical engineers, but not for the protection engineers! It requires significant input data but, for the most part, is exciting and relatively straightforward. A basic understanding of Boolean expressions. Romero Engineering Company offers high-quality video-based online courses for power engineers. Audio tracks for some languages were automatically generated.
