

How to tell if it s single-mode or dual-mode fiber optic

Overview

To identify whether your SFP module is single-mode or multimode, follow these steps: The easiest way to determine the type of your SFP module is by checking the label or the product's specifications. Manufacturers will typically mark the module with "SM" for single-mode and "MM" for. There are two main types of fiber optic cables: single mode and multimode. Although they can do the same job in some instances, the different construction methods make each of them better suited to certain tasks and budgets. But not all fiber cables are created equal: multimode (MM) and single mode (SM) fibers are the two primary types.
