

Introduction to Relay Protection Test Bench

Overview

These ground-fault relay test units are used on substations, motor control centers, central distribution panels, switchboards, and test benches to verify relay operations. This product group also includes an impact resistance case and selector switch for more testing. Our test bench features the most common protection relays used in modern power plants such as: - Generator protection relays: GE Multilin© G60, Basler® BE1-11. - Transformer protection relays: GE Multilin© T60. With. Abstract - This paper describes Relay Assistant, a new Win95/NT software for automated open-loop transient testing of protective relays. By using Relay Assistant users will be able to. The MTS-5100 is the most powerful all-in-one relay test system with a direct front panel interface for all functions, without exception! The ideal system for testing and calibrating protective relays using traditional test techniques or applying realistic power system simulations. Easily test. Author to whom correspondence should be addressed. The system consists of the SEL-AMS Adaptive Multichannel Source and either the SEL-5401 or SELtest software. Just as electrical circuits may range from a few watts to 100 megawatts, the size and rating of the relays vary considerably.
