

Light Shield requires a module

Overview

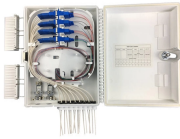

Read this document and the documents listed in the additional resources section about installation, configuration, and operation of this equipment before you install, configure, operate, or maintain this product.

Light Shield requires a module

The external module allows material to pass through the GuardShield PAC safety light curtain multi-beam sensing field without stopping the machine or equipment as long as the muting conditions are ...

A light shield, sometimes called a glare guard, is typically a metal or plastic attachment fitted around a light fixture. It works by blocking the light that would otherwise shine outward or upward.

A light shield is a device designed to control the direction and spread of light. It is essential for reducing light pollution, minimizing glare, and preventing light trespass onto adjacent properties.

A larger shield may be necessary for high-intensity lights to effectively control glare, while smaller fixtures may require more compact designs. Additionally, the shape of the shield can influence how ...

If you are configuring the light curtain with Connected Components Workbench software, set DIP switch 1 to ON. Otherwise, use the settings that are defined in the following tables.
