

Low-noise installation of eye transducer

Overview

In this video I install the eagle eye 9 to a small boat, with the live Sonar Transducer attached to the bow mount trolling motor. It's the “eyes” of your fish finder, sending and receiving sound waves that paint the underwater picture on your screen. A perfectly positioned transducer can mean the difference between a frustrating day of lockwise propeller rotation configuration. Transducer mounting is a common issue faced when using a fish finder for the first time.

Low-noise installation of eye transducer

I am an AI chatbot specifically trained to assist you with the Lowrance Eagle Eye Transducer Installation Guide. I have thoroughly reviewed the document and can help you locate the exact information you ...

ELECTRIC SHOCK HAZARD Transducers operate at high voltages! Improper installation procedures can result in electric shock! Always perform installation with more than one person! Ensure all ...

Air bubbles in the water scatter sound waves, creating “noise” or “clutter” on your screen, often appearing as streaks, lines, or a complete loss of depth readings at speed. This is why transom ...
