

# Maximum Current of Tubular Busbars

## Overview

Rated Current ( $I_r$ ): Continuous current the busbar must carry without exceeding permissible temperature rise. The International Electrotechnical Commission (IEC) issues globally accepted standards that promote safety and efficiency in electrical engineering. This standard defines the design verification, test requirements, and thermal performance of the assemblies. The current rating is calculated from the conductor cross-sectional area, material (copper or aluminium), and maximum. To calculate Busbar Current, enter the width (mm), thickness (mm), and material carry capacity factor (amps/mm<sup>2</sup>). Poor quality of electrical devices and materials.
