

Multiple trips in the distribution box

Overview

Your electrical distribution box (commonly called a breaker panel) contains multiple circuit breakers that control power flow to different home areas. Frequent tripping isn't just inconvenient - it indicates potential safety hazards like electrical fires or equipment damage. Circuit breakers serve as your home's electrical guardians - they automatically cut power when detecting dangerous conditions. Occasional tripping is normal protection behavior, but frequent tripping signals underlying issues needing attention. For facility managers, electricians, and project owners operating overseas—from industrial plants in the Middle East to solar farms in Southeast Asia—these unexpected shutdowns mean costly downtime, safety risks. Before you panic, the solution might be as simple as resetting a tripped MCB in your DB box. This quick guide will show you exactly how to do it safely. If you're a homeowner in Malaysia, understanding your DB box (distribution board) is an essential skill. I've owned many homes and have solved many breaker issues but I'm stumped on this one.

Multiple trips in the distribution box

Everything that is tripping is coming off of the 110 breaker panel and I haven't experienced any trips with the 220 panel. And even more odd it started doing this a about a month ago over a 3 to 5 day period ...
