

No need for a telecom fiber optic router

Overview

The good news: Fiber-optic internet does not require a special router in most cases. The key is making sure your router can actually handle fiber's performance. This device connects the fiber optic line to your home network. This technology change brings many benefits. An optical network terminal will be installed in or outside your home, at no cost, which acts as a modem. Fiber-optic connections use light signals to transmit data through fiber cables, which connect directly to a device or network, bypassing the need for a traditional modem. If you don't have (or want) a physical cable connecting your home to the internet, you can still connect with a wireless internet connection. Each has its pros and cons, so we're here.

No need for a telecom fiber optic router

With TDS fiber service, there's no need for a modem. An optical network terminal will be installed in or outside your home, at no cost, which acts as a modem. Any wired or wireless router will work with ...
