

Open-type pigtails have high reflective power

Overview

The FC type pigtail has a simple structure and is easy to operate, making it user-friendly even for beginners. However, its main drawback is susceptibility to dust interference, which can cause Fresnel reflection, thereby affecting the performance of insertion loss and return. Fiber pigtails are simple in appearance, yet essential in function. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. By combining factory-installed connectors with spliced bare fiber, pigtails ensure that network installers can create. OZ Optics offers a complete line of high power fiber collimators and focusers with low backreflection, designed to collimate or focus light exiting a fiber to a desired beam diameter or spot size.
