

Optical Module Thermal Conductive Gel Dispensing Machine

Optical Module Thermal Conductive Gel Dispensing Machine

Once a thermal interface material (TIM) has been selected and the dispensing system has been defined, the next step is to analyze the part(s) to ensure that the correct volume of TIM is delivered to the ...

Let our experts help you design a complete thermal interface solution—from precision syringe applicators to fully automated dispensing robots tailored for high-viscosity materials and ...

Second Intelligent has 20 years of professional R&D and manufacturing experience in glue dispensing machines, automatic potting machines, coating machines, and liquid dispensing valve ...

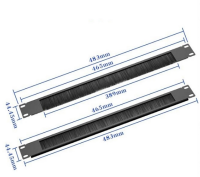

Precision dispensing of thermal conductive gel materials requires specialized equipment designed to handle the unique properties of these materials. Our engineering team has tested multiple ...

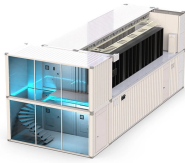

Our diverse selection of Thermal Interface Material valves and dispensers include metered piston dispensers such as MR2 and valves such as the PDP and PCP. The PVA-1GPU dispensing ...

Innovative bonding, dispensing and potting systems for automotive, electronic or medical solutions from the Atlas Copco product line Scheugenpflug.

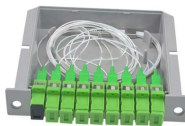

Innovative bonding, dispensing and potting systems for automotive, electronic or medical solutions from the Atlas Copco product line Scheugenpflug.

GELs are truly unique materials, in that they are fully cured thermally conductive polymers that can be extruded. The advantage in using thermally conductive GELs is that they do not require any mixing ...

BTEKMETERMIX is committed to creating a high-precision platform for the dispensing of all kinds of TIM dispensing, providing solutions for different Thermal Interface Materials, such as thermal paste, ...

Engineers have a variety of products available for dispensing thermally conductive adhesives, including state-of-the-art equipment such as the following options.

Discover accurate, repeatable dispensing for Thermal Interface Materials (TIM) including thermal grease, thermal adhesive, and more.
