## Overview

An Optical Module PCB is the miniaturized substrate housed inside optical transceivers. SFP (Small Form-factor Pluggable) optical modules are compact, hot-pluggable transceivers that enable network equipment to connect seamlessly to fiber and copper links. These modules, including SFP, SFP+, and SFP28, are widely used in enterprise networks, data centers, and carrier-grade deployments. Integrated circuits and reference designs help you create a smaller and faster optical module design used in high-bandwidth data communication applications. To ensure the performance and reliability of such modules. The Open Eye MSA was formed with the goal of relaxing the industry standard optical specifications to enable reduced power, latency, size and cost of high performance optical modules. 6T optical modules, 800GE optical modules, 400GE optical modules, 100GE optical modules, 40GE optical modules, 25GE optical modules, 10GE optical modules, GE optical modules, FE optical modules, and so.
