

Philippine Cold Aisle Rack Type

Overview

The VNA Racking System is a Very Narrow Aisle storage solution designed for maximum space utilization, allowing high-rise pallet storage using specialized forklifts in compact aisles. Aisle containment ceilings, walls and end of row doors are designed to help maintain optimal operating temperature in server rooms and data centers in order to lower data center energy demands and save on energy costs. Eaton offers a wide range of partial and total containment solutions that can. Taking the cold storage of a large fresh food cold chain enterprise in the Philippines as an example, the enterprise mainly stores and distributes fresh products such as seafood, meat, and fruits and vegetables. The cold storage is located in the suburbs of Manila, covering an area of about 15000. Hot aisle containment systems for data centers leverage the principle of rising hot air. As servers generate heat, the exhaust goes to an overhead plenum, where it's trapped and converted to cold air by outside compressors (a process similar to a split-type air conditioner's refrigeration system). Conventional pallet racking allowing easy access to all pallets.
