

## Selection Guide for 100G Optical Line Terminals in Safe City-Level Projects

### Overview

This article tells you how to choose 100G QSFP28 modules for medium and long transmission distances, as well as the advantages of QSFP28 modules and why you should choose it. Modern OLTs offer communication service providers (CSP) the ability to launch multigigabit services to tens of thousands of subscribers from a single location or just ten. Fiber-to-the-home (FTTH) network operators benefit from deploying OLT solutions that span dense urban, suburban, and rural. When you pick a 100G QSFP28 transceiver, think about what your network needs. Check important things like compatibility, how far data must travel, fiber type, connector type, where you will use it, and if it will work in the future. 5 Gbps GPON ONU small form-factor service delivery terminal providing one 2.5 Gigabit Ethernet (GE) interface delivering IPTV video and data services, and one voice line supporting carrier-grade VoIP (SIP). Cisco CPAK<sup>®</sup> 100GBASE fiber modules for Cisco<sup>®</sup> switches and routers offer a selection of high-density 100-Gbps connectivity solutions. The modules are especially well suited. Widely deployed in WAN, data center, and enterprise networks, Juniper's portfolio of direct-detect and coherent 100G optical transceivers are critical in meeting the ever-growing bandwidth needs

of network operators.
