

Selection Guide for Cloud Computing-Grade Passive Optical Networks NRZ

Selection Guide for Cloud Computing-Grade Passive Optical Network

This paper presents a number of techniques that allow non-return-to-zero data rates as high as 40 and 56 Gb/s in 45-nm and 28-nm CMOS technologies, respectively. The prototypes operate with a CL of ...

This specification describes technical and performance criteria for deploying a passive optical LAN capable of providing connectivity for a number of different applications/services.

This work has been accepted for publication in IEEE Network, March 2022 special issue: Next-Generation Optical Access Networks to support Super-Broadband Services and 5G/6G Mobile ...

Recommendation ITU-T G.9804.3 describes a 50-Gigabit-capable passive optical network (50G PON) system in an optical access network for residential, business, mobile backhaul and other ...

This paper presented the GENIO platform, which seamlessly integrates edge computing capabilities within Passive Optical Network (PON) infrastructures, allowing for effectively transforming ...

To the best of our knowledge, this review is the first to survey the high-speed 100 Gbp next-generation passive optical network (NG-PON). The insights ...

For systems designers and manufacturers working on the next generation of high-speed networks, Semtech's multi-lane and multi-rate 10Gbps-100Gbps backplane solutions provide cost effective, low ...

In order to provide higher capacity and meet higher transmission performance requirements, it is necessary to further explore the application of the beyond-100G passive optical ...

In this article, we address the challenge of dynamic allocation of virtual PON slices over mesh-PON architectures to support C-RAN and MEC nodes.

Last updated on Apr 29, 2026.

To the best of our knowledge, this review is the first to survey the high-speed 100 Gbp next-generation passive optical network (NG-PON). The insights from this review can benefit the ...

In outlining the foundational concepts that provide the building blocks for grid/cloud solutions that meet the stringent application requirements we highlight, a prominent role is played by ...

We review the current existing technologies, mainly in terms of the physical layer and higher media access control layer.
