

Singapore Microprocessor Relay Protection Tester

Singapore Microprocessor Relay Protection Tester

The type of testing required for each specific relay needs to be designed with the goal of accomplishing the objective. The objective depends on the specific needs and wants of the customer and ARC is ...

The SMRT46 is capable of testing a wide variety of electro-mechanical, solid-state and microprocessor-based protective relays, motor overload relays and similar protective devices.

The SMRT1D incorporates the latest in digital signal processing and microprocessor-based technology to provide the most advanced yet, easy to use, single-phase relay test system on the market today.

Individual test programs for each type of protection relay are needed, but the interface used is standard for all protection relay types. Control of input waveforms and analogue measurements, the ...

Specialized hardware and software solutions for single- and multi-phase microprocessor relays, including digital substations applications (IEC 61850 networks). Compact, high-power relay test ...

The SMRT410 and 410D Megger relay test system is a multipurpose, lightweight, field portable test set capable of testing a wide variety of electromechanical, solid state, and microprocessor-based ...

ZUOLEJIA | Microprocessor Controlled Relay Protection Tester Simplified Chinese Prompting Easy Operation 3/6 Phase

The SMRT1D incorporates the latest in digital signal processing and microprocessor-based technology to provide the most advanced yet, easy to use, single-phase relay test system on the market today.

Verify that power system has sufficient redundant and back-up protection while relay is out of service for testing. Use test switches to isolate output contacts to prevent undesired tripping ...

The SMRT46 is a multipurpose, light-weight, field portable test set capable of testing a wide variety of electro-mechanical, solid-state and microprocessor-based protective relays, motor overload relays ...
