

Standards for Explosion-Proof Concealed Electrical Boxes

Overview

IECEX and ATEX describe general requirements for the construction, testing, and marking of electrical equipment, components, or devices intended for use in explosive atmospheres. The enclosures are for use in hazardous locations where explosive gases and dust might be present. They are. Unlike standard distribution boxes that could become shrapnel shards in volatile environments, explosion-proof containers are engineered fortresses that absorb, contain, and vent catastrophic blasts without becoming fragmentation bombs themselves.

Standards for Explosion-Proof Concealed Electrical Boxes

Explosion-proof enclosures are used by such facilities to ensure the safe housing of electrical components that could cause a spark and ignite these gases in the atmosphere.

Note to paragraph (c) (3) of this section: The National Electrical Code, NFPA 70, contains guidelines for determining the type and design of equipment and installations that will meet this requirement.
