

Tariff Costs Cybersecurity Equipment SFP

Overview

According to an analysis from Yale Budget Lab, the price of that equipment is projected to soar by 14% in the short run and by 6.2% in the longer term as a result of the new tariffs (as of May 12). To the extent that rising prices and/or disrupted supply chains for. As of March 4th, the U. These tariffs—25% on many Mexican and Canadian imports, a 10% levy on Canadian energy, and a doubling of. President Trump's tariffs announcement sent US cybersecurity stocks into a precipitous spiral, fostering fears of cyber spending cuts and the possible rise of cyber 'monocultures.' The introduction of new US tariffs has significantly rattled the US cybersecurity sector, reducing the stock market. Tariffs may raise or lower the cost of physical goods, but they also influence how and where sensitive data moves, who processes it, and what technologies are used to secure it.

Tariff Costs Cybersecurity Equipment SFP
