

Technical Support for Explosion-Proof Cold Aisles in Ukrainian Data Centers

Overview

TechnoGuard's Containment Solutions improve airflow efficiency delivered to IT equipment, improve energy efficiency and drive operational costs down. We provide the best solution to eliminate hot and cold air from mixing between aisles regardless of rack configuration and other design. Data center teams can often struggle with managing hot spots, wasted cooling, pressure imbalances, and tricky retrofits, all while balancing tight containment with easy access and safety. These issues increase energy use and slow maintenance. Rittal's new aisle containment line solves these. With 35 years of operational experience, EDP designs, manufactures, and installs bespoke aisle containment systems that improve airflow management in Data Centre environments for retrofit, new build, and hyper-scale projects. Proven solutions that improve airflow management in Data Centres and aid. Cold aisle containment (CAC) is a proven data center cooling strategy that creates

physical barriers around cold air supply zones, preventing contamination from hot exhaust air and eliminating the energy-wasting effects of air mixing. We have led both adoption and innovation in our Building Information Modeling (BIM) approach and integration.
