

Two fiber optic cables connected to the switch

Two fiber optic cables connected to the switch

One way to inter connect AB and BC segments is by fusing a pair of required fiber cores. Another way is to put a switch at Location B and interconnect using SFP modules.

In cases where the distance between switches exceeds the total cable length, you can use the LC-LC coupler to connect two fiber optic cables together. For example, insert the connector ...

At this point, I have a separate "dumb" switch to do this and separate cabling, but at our new location, this isn't easy to do, as I have to deal with 2 separate buildings, so I would need to pull ...

Choose an SFP module based on the fiber optic cabling that will be connected to the network switches. SFP transceiver modules almost always require two fiber optic cable strands.

A fiber optic ring network is a physical or logical network topology where devices (usually switches) are connected in a closed-loop using fiber optic cables. Each node is connected to two ...

If there is no link light when you connect the fiber port, you have most likely a physical layer issue. So, check to see if your SFPs are multimode or single mode

Each patch cable was “ab” to “ba”, and two of them together (one on each end) was causing this issue. I was able to separate the LC/LC connectors and swap one end to make the ...

Fiber optic cables can be connected together using a couple of different methods: 1. Fusion Splicing: This method involves aligning the ends of the two fiber optic cables and then fusing ...

Choose an SFP module based on the fiber optic cabling that will be connected to the network switches. SFP transceiver modules almost always require two fiber optic cable strands.

Shether you are upgrading your network or setting up a new one this step by step tutorial will help you make the right choices.
