Overview

Motor Control Centers are specialized distribution boards designed for controlling and distributing power to electric motors. The list of electrical abbreviations used in a set of construction drawings varies from office to office. Help make Archtoolbox better for everyone. Use Ctrl + F on your computer to. A distribution board (also known as panelboard, circuit breaker panel, breaker panel, circuit breaker, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit. The consolidation point is the transition point from a permanent infrastructure for power, signal and data to the workstations or outlet network. The EV charging box and vehicle communicate with one another through the CP contact the PP contact is passive. Both contacts refer to PE as 0 V.
