

What is a fiber optic pigtail and how is it easy to peel

Overview

The fiber optic pigtail is a type of fiber optic cable with a pre-installed connector on one end while the other remains unterminated. By combining factory-installed connectors with spliced bare fiber, pigtails ensure that network installers can create. Executive Summary: A fiber optic pigtail is one of the most commonly specified yet least understood components in structured cabling.) fitted on one end and the other end undressed (for connection through fusion or splicing) to the main fiber optic cable. This article will show you what a fiber optic pigtail is.
