

What is magneto-optical-electric fusion storage

Overview

Magneto-optical (MO) disks represent a unique fusion of magnetic and optical technologies to offer a data storage solution that stands out for its blend of durability, storage capacity, and data transfer speeds. A Magneto-optical disc surface has sector partition rectangles. Discover its advantages and applications. Our technology builds on proven inertial fusion concepts demonstrated at US National Laboratories to provide an affordable, practical, and scalable fusion system. First developed at the end of the 1980s they use optical disk media which has an active magnetic layer. The disk is coated with film that initially is uniformly magnetized. A laser beam is used to demagnetize a small spot on the film by heating it above a critical temperature (the Curie).
