

# What optical module should I pair with a 1G optical port

## Overview

Note that, both 1G dual and BIDI fiber modules should be used in pairs. However, selecting the right 1G SFP module is far more complex than simply choosing a “1 Gbps” optic. Network engineers and procurement teams must consider multiple variables, including transmission distance, fiber type, wavelength, equipment compatibility, operating environment, and total cost of. This optical module speed guide helps you choose transceiver speeds from 1G through 400G with the compatibility, reach, and operational details field engineers actually verify. What is the safest way to choose. An optical transceiver is a modular component that converts electrical signals into optical signals (and vice versa). Installed in switch or router ports, transceivers enable fiber-based communication between network devices. Key characteristics include: Speed: 1 Gbps, 10 Gbps, 25 Gbps, or higher. For 1G dual fiber SFP, 850nm, 1310nm, and 1550nm are the most used wavelengths, while 1G BIDI module's wavelength includes TX1310/RX1550nm, TX1550/RX1310nm, TX1490/RX1550nm, TX1550/RX1490nm, TX1310nm/Rx1490nm and TX1490nm/Rx1310nm. Can I plug a 10G SFP+ into a 1G SFP port?

No. Mixing rates on a single link (e.
