

What to do if multimode fiber is too long

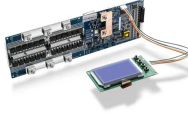

Overview

However, when dealing with long-distance transmission needs, switching multimode optical fibers to single-mode fiber can be the best approach. While single-mode fiber (SMF) is often preferred for long-distance applications, multimode fiber (MMF) is a popular choice for shorter distances due to its cost-effectiveness and sufficient performance. Optical Power The more power coupled into the fiber, the longer the transmission distance. While fiber optic cables are generally more reliable than traditional copper cables, they can still experience problems from time to time.
