

Which part of the optical module is the best

Overview

OSFP is the best option for future-proof 800G and 1.6T systems, offering strong cooling and scalability. The optical module serves as a crucial component in optical fiber communication systems, operating at the physical layer, which is the lowest layer in the OSI model. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa. Among various optical module form factors, SFP (Small Form-Factor Pluggable).
