

Which side does the distribution box open from

Overview

The distribution box directs the effluent from the septic tank through the drain field and pipes. A distribution box uses MCBs, RCDs, and busbars to protect circuits, prevent shocks, and ensure safe power distribution in homes and buildings. Its main job is to take the incoming power supply and distribute it to multiple circuits within the building, ensuring that electricity is delivered safely to different areas. more Audio tracks for some languages were automatically generated.
