## Overview

Check for proper IP/NEMA ratings and material quality. Ensure safe placement: install in dry, accessible areas with good ventilation and at appropriate height (typically ~1. Most jurisdictions require licensed electrician involvement for breaker. All DC conductors of renewable energy systems, both grounded and ungrounded, installed inside a building or structure will still require metallic raceways cables and enclosures, based on Rule 64-062. A photovoltaic combiner box is permitted to be installed on the roof and it is preferred to be as. er combiners or to the inverter, which reflects the logic of having the combiner box as close as possible to the array (on the supporting means are considered to be straps or other devices located within 300 mm of every box or fitting and at inter al protection against rodents for PV source circuit. Wiring solar panels to a breaker box requires connecting the solar inverter's AC output to your electrical panel through either a load-side connection (after the main breaker) or a supply-side connection (before the main breaker). Load-side connections must follow the NEC 120% rule: (Main Breaker + .
